Full Stack Software Engineer with 5+ years of experience building telecommunications platforms, operational tooling, and business applications. Delivered systems serving 100,000+ subscribers, reduced dealership bad debt by 40%, and built monitoring infrastructure supporting 100+ live camera deployments. Specializes in TypeScript, React/Next.js, PostgreSQL, and automation-driven solutions.

SKILLS

- **Primary:** Next.js, Node/Bun, PostgreSQL, React, HTML, CSS
- **Secondary:** Rust, Go, Python, MongoDB, Svelte
- **Infrastructure:** Docker, NGINX, Cloudflare R2, S3, Vitest, ElasticSearch
- **Interests:** Leadership, Data Analysis, Entrepreneurship, Collaboration, Knowledge Management

WORK EXPERIENCE

Viaero Wireless

May 2022 – Current

Full Stack Developer

- Delivered and maintained customer-facing and internal applications supporting **100,000+ telecommunications subscribers**.
- Built provisioning and operational tooling that reduced manual workflows for customer service, marketing, and network operation teams.
- Led cross-functional project teams and partnered with business stakeholders to gather requirements, deliver features, and train end users.
- Mentored users and conducted training sessions for newly deployed software systems.

Solutions Artisan Ltd.

May 2019 – Current

Developer (Contract)

- Designed and delivered custom software solutions for small businesses across automotive, retail, and service industries.
- Led discovery, development, and client training for custom web applications and websites, including [All About Paws](#) and [CMB Auto Sales](#).

PROJECTS

Advanced Weather Monitoring

May 2019 – Current

Delivers critical weather monitoring capabilities to local broadcasters

- Empowered news reporting teams with tools to facilitate real-time monitoring on weather and police activity.
- Manages, streams, and captures more than **100 camera towers** spanning multiple geographic regions.
- Control VAPIX cameras through a Bun server and a TanStack Start web application.
- Integrates with Google APIs to deliver video to our audience through GCP's YouTube endpoints.

Paging and SMS platform

Feb 2026 – Aug 2026

Serves the full customer service team and highly-available network operations staff

- Led end-to-end delivery of a mission-critical paging and SMS platform, replacing a legacy Windows application with a high-availability microservices stack (Bun/Elysia, Rust, RabbitMQ, PostgreSQL) deployed on Docker Swarm and serving the full customer service team and 30 rotating on-call networking staff.
- Architected a two-layer monorepo: a transport layer that submits SMS to a carrier SMSC over SMPP and tracks every status transition; and a product layer that ingests Huawei network alarms over IMAP, resolves on-call ownership from Microsoft Entra, and dispatches pages via SMS and email.
- Built a Rust SMPP transceiver that bridges AMQP and the carrier SMSC as a pure protocol adapter, handling up to **100 messages/second** and publishing all status transitions back to the stack for real-time persistence and WebSocket fan-out.
- Owned full lifecycle of the system, including requirements gathering, stakeholder collaboration, implementation, and deployment.
- Ensured reliable, 24/7 on-call paging and customer communication with no single point of failure.

Customer Cell Provisioning

Dec 2022 – May 2023

Interact with provisioner nodes from multiple providers on Viaero's network

- Developed a telecommunications provisioning platform using Next.js, Typescript, and XML-based carrier integrations.
- Automated customer account provisioning workflows for a subscriber base exceeding 100,000 customers.
- Reduced manual provisioning effort by translating user actions into provider-specific XML requests.

AutoFLP

Jun 2022 – Current

Transforms operational efficiency for family-owned auto dealerships

- **Cut bad debts by ~40%** through advanced data analytics, surfacing of real-time payments, and past-due alerting for a previously-offline application.
- Shrank average **transaction time from 30 minutes to 7 minutes** through smart integration of customer information.
- Reduce administrative overhead by streamlining previously manual processes with a bespoke fullstack application.
- Integrated Cloudflare R2/S3 for PDF document management.

EDUCATION

University of Northern Colorado

Bachelor of Business Administration, Computer Information Systems

- Treasurer, Phi Sigma Pi National Honor Fraternity; Scholar of the Reisher Family
